## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-7 and 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Galley et al, WO 91/11105 in view of Guthrie et al, WO 02/054872.

Galley et al teach an antimicrobial composition comprising potassium iodide, sodium thiocyanate, polyvinylpyrrolidone/hexadecane copolymer, glucose oxidase, mineral oil, and the balance water (page 27, example 21). Galley et al do not teach a periodic acid in their composition.

Guthrie et al teach an antimicrobial composition comprising potassium iodide, sodium thiocyanate, and periodic acid (see abstract) wherein Guthrie et al specifically reference the Galley patent and teach that the glucose oxidase of Galley may be replaced by periodic acid to obtain an effective antimicrobial composition (page 2, lines 25-32). In view of this very specific teaching, it would have been obvious to one of ordinary skill in the art to substitute periodic acid for the glucose oxidase in example 21 with a reasonable expectation of successfully

obtaining an effective antimicrobial composition because this is precisely the teaching of Guthrie et al.
